

**HUMICLIMA**

"HUMICLIMA brings the highest degrees of safety and professionalism to every project"

## INDEX

HUMICLIMA is a Spanish multinational company with its head office in Palma de Mallorca and ranch offices in a number of different countries throughout the world. Its activity centers on the range of specialisms included in the equipment of buildings, such as HVAC, hydraulic, fire protection systems and electricity. For all such high technology installations, Humiclíma provides maintenance and after sales services, all of this supported by advanced tools for checking and supervision via I.T. systems. The company complies with the most demanding quality and environmental regulations.

“Large-scale resources  
for the best results”

## INTRODUCTION

“Working for our main clients, the hotel companies, we have learnt to carry out projects successfully all over the world”

Humiclíma was founded in Mallorca in the mid 1970s, with the declared aim of offering an all-round service and an adequate capacity of response to the demands of the hotel sector, which at that time was booming.

The response to this demand entailed embarking on a process of development and expansion throughout Spain, setting up regional offices in strategic areas.

The company's first international activity began in the early 1990s, as a continuation of a response to demand on the hotel industry. Humiclíma's first project outside Spain was carried out in the Dominican Republic and it marked the beginning of the expansion of the company. Today Humiclíma has offices in the Caribbean, Central America and South America and has undertaken projects in Africa and a variety of European countries.

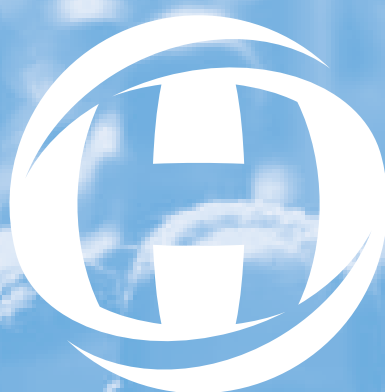

However true it may be that Humiclíma's beginnings responded to the hotel companies' de-

mands, tenders and contracts were soon extended to industrial, residential and government sectors too. Nowadays, Humiclíma has an extraordinary experience to tackle any installation anywhere in the world.

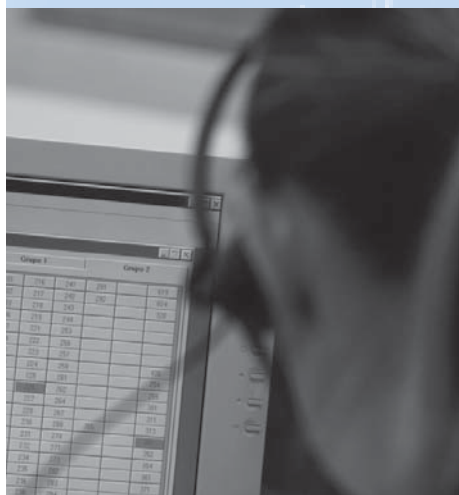

In 2006 Humiclíma became part of Grupo Cobra, which is in turn a subsidiary of ACS, one of the largest industrial groups in the world. This change has seen new challenges and considerable improvements, as forming part of such a major construction and services concern involves an increase not only of resources but also of standards of quality and reliability when fulfilling obligations entered into.

“By making the most of the synergies with the other companies in our group, we have become even stronger”

"40 years of experience and over 2.000 projects endorse our position as leading company for all types of installations"

"Quality and respect for our clients' needs are an inescapable commitment and at the same time our core values"

## COMMITMENTS

### To Quality

One of Humiclimate's fundamental strategic objectives is the promotion and maintenance of quality as the basic element of our service culture, making it a reality in each one of our day to day tasks.

Quality is a way of working in professional life, with an approach that is evident in great conscientiousness and responsibility in all spheres of work, with clients, within the company itself and with suppliers.

### To the Client

Humiclimate is forty years of experience. Humiclimate has stood out as a company that puts the needs of the clients before our own interests, since our main commercial aim is to create customer loyalty. This has meant that, practically right from the start, we have been able to count on a portfolio of clients, who, year after year, have contracted the services of the company for their new projects.

"A project is successful if the client comes back to us. That is our greatest pride"

## To Competitvity

Humiclma has been carried out its activity in a number of different global locations for many years now. This has led us to set up work systems and a methodology that is easily adaptable to the different requirements of each country.

Humiclma has a Logistics Department that enables us to send materials anywhere in the world. We have suppliers all around the globe.

**“Humiclma is a highly competitive company, fully capable of carrying out a project to the required quality at minimun cost in any country in the world”**

We have teams of qualified professionals in all the countries in which we are present; this helps to make our productivity very high when executing projects.

All these factors make humicli-ma a very competitive company, capable of carrying out a project to the required quality at minimun cost.

## To Innovation

We believe innovation is an essential value for firms whose activities are linked to technology.

We devote a great deal of our time to the training and recycling of our technicians and operatives, in addition to research and analysis of all available information about advances in our sector.

Humiclma is an innovative company that started off fitting air conditioning and it has evolved into a firm that is perfectly capable of planning and delivering the installation of any kind of technology in any building anywhere in the world.

**“Humiclma is a company that has large-scale resources at its disposal with which to achieve the best results”**

## To the Environment

Humiclíma, as a company with ISO 14001 certification, considers respect for the environment to be a strategic priority

To this end, every installation project is conceived of in terms of energy efficiency compliance with clients' environmental requirements and the legislation in force in each country.

"Each installation we carry out is analysed from an energy efficiency perspective"

"Brazil, Mexico, Cape Verde and Haiti are some of the countries where we have worked. Our projects are adapted to the requirements of every different location"

“Impeccable execution is essential for our installations to be handed over without delays and then work reliably”

## HEATING, VENTILATION AND AIR CONDITIONING (HVAC)

“Humiclimate always encourages dialogue with the client so as to arrive at the best solution”

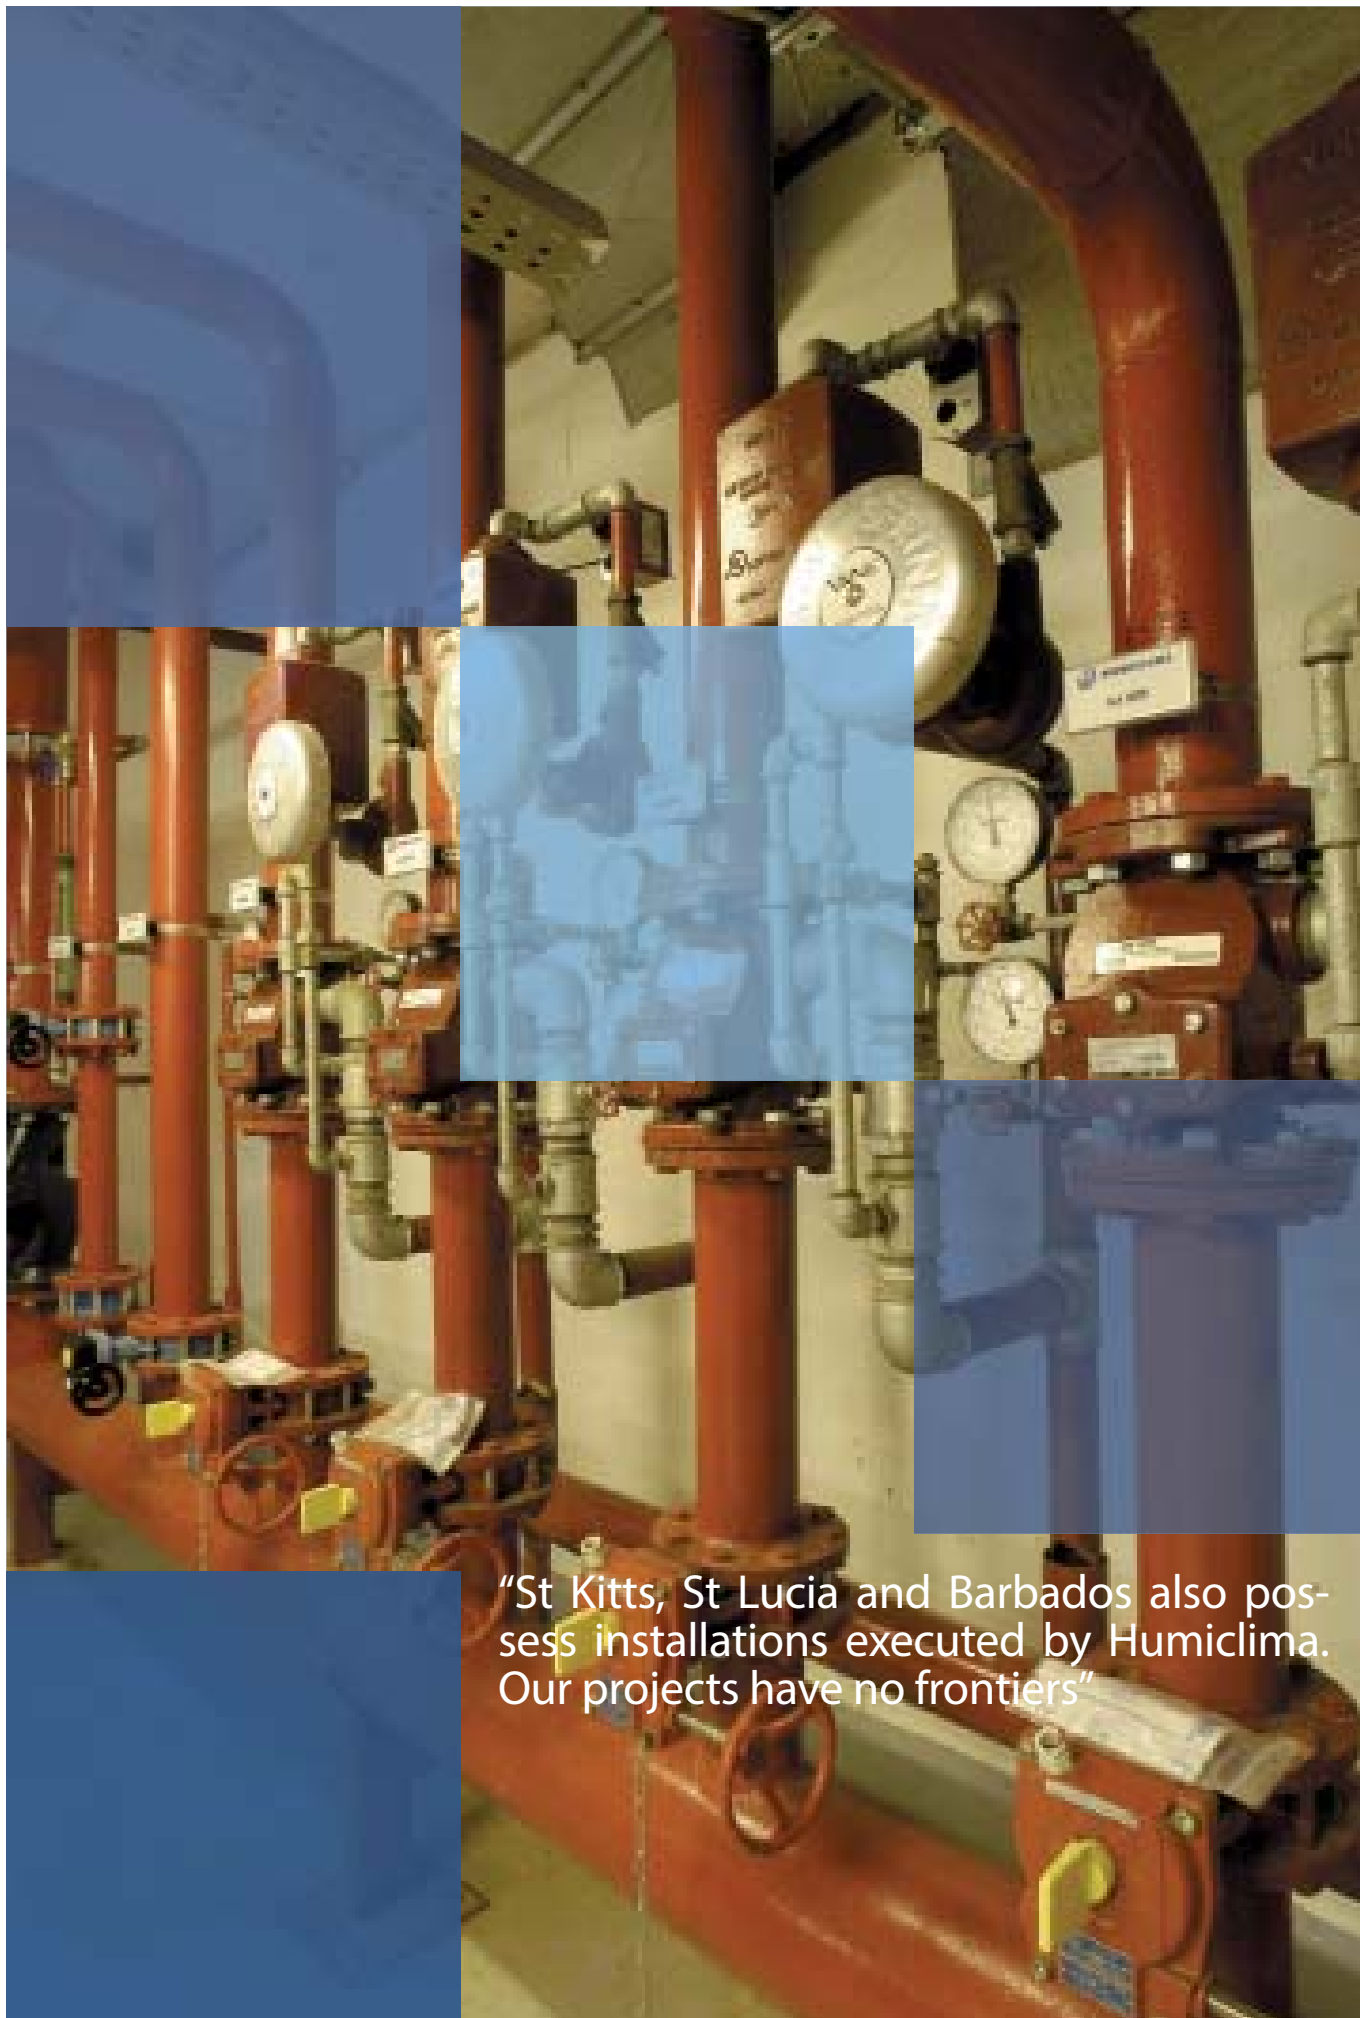

Defining the most appropriate solutions to any project requires a great deal of experience and thorough knowledge of the alternatives available. Humiclimate keeps abreast of technological advances, which are continually throwing up new solutions, whether these have to do with comfort, efficiency of the system or respect for the environment. Humiclimate is obsessed with planning and executing installations that ensure the maximum energy efficiency. This helps to reduce both running costs and the impact on the environment.

The execution of any planned installation requires great flexibility and response capability. This enables us to advise the client and cooperate pro-actively with the project designer, contributing experience and knowledge to be able to arrive at the best solution.

What is essential is to have responsible and competent professionals on hand to take on-site decisions.

"St Kitts, St Lucia and Barbados also possess installations executed by Humiclina. Our projects have no frontiers"

"Humiclima implements all types of hydraulic services in any building"

## HYDRAULIC SERVICES

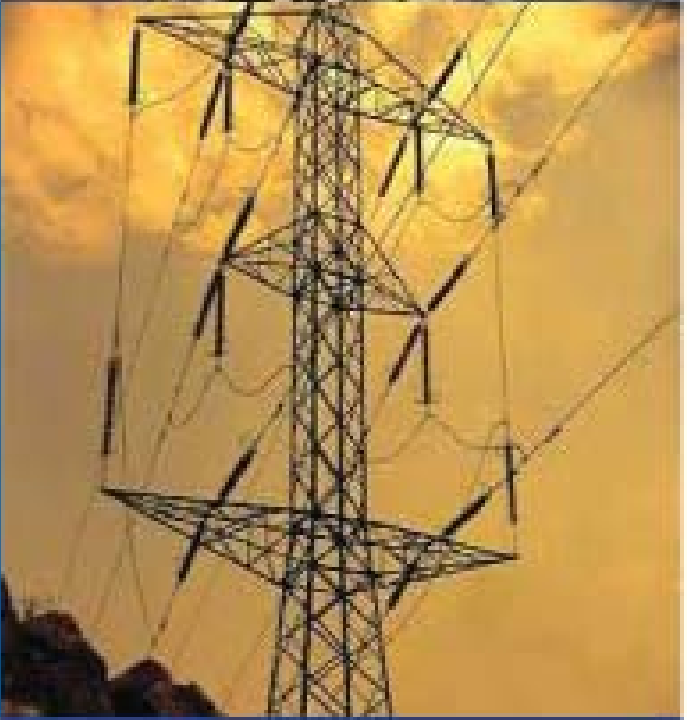

"We install the most appropriate systems in each country, in accordance with our standards of quality and the operational requirements of our clients"

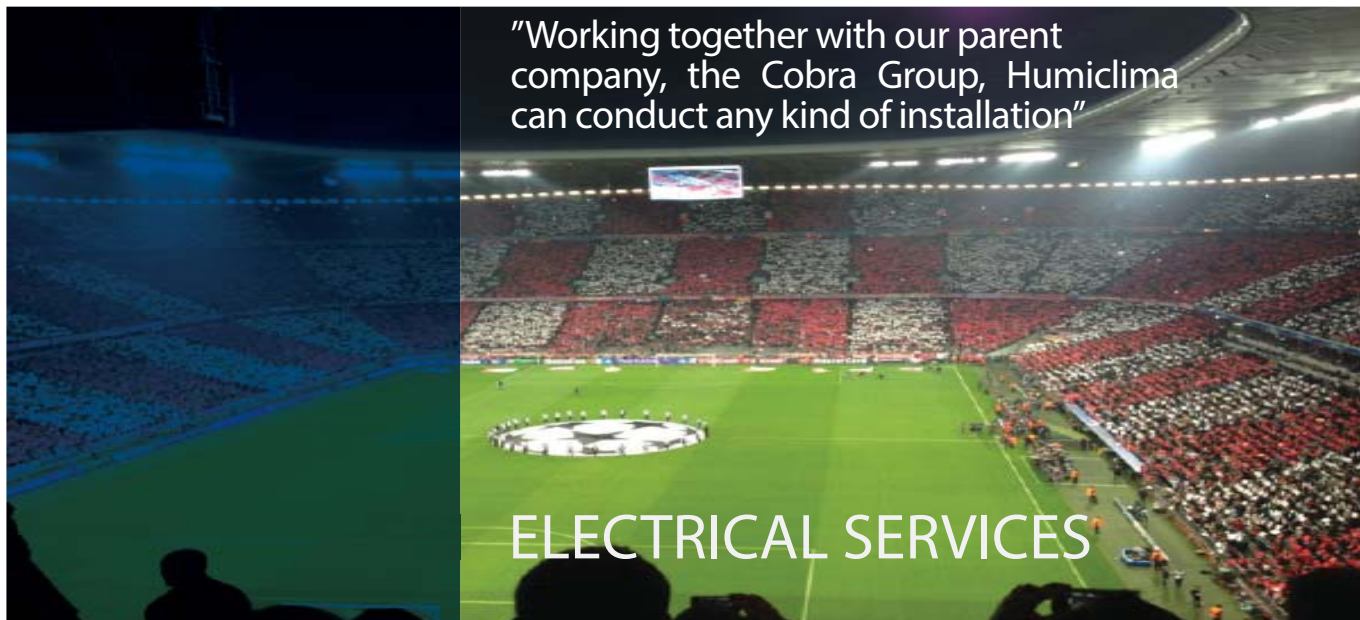

Humiclima delivers plumbing, drainage and fire systems in any type of building, in full compliance with the norms and regulations in force in every location.

Humiclima's presence in a great deal of countries gives us access to the latest advances in each field. This store of knowledge is exportable to all other countries, so enabling us to pick the best materials and systems in terms of their cost and availability.

"We always apply safety, reliability and energy efficiency criteria"

"Working together with our parent company, the Cobra Group, Humiclima can conduct any kind of installation"

## ELECTRICAL SERVICES

Humiclima is specialized in electrical installations. As an added value, it should be noticed that belonging to Cobra Group allow us to have all kind of resources and means to give solutions to any project no matter its scope.

"Humiclima counts on a high qualified team to carry out all kinds of electrical and communication installations"

From our electrical department, projects of some magnitude have been undertaken.

We work in the following fields:

\* Medium Voltage Installations:  
Medium Voltage Wiring  
Voltage Transformation Centers

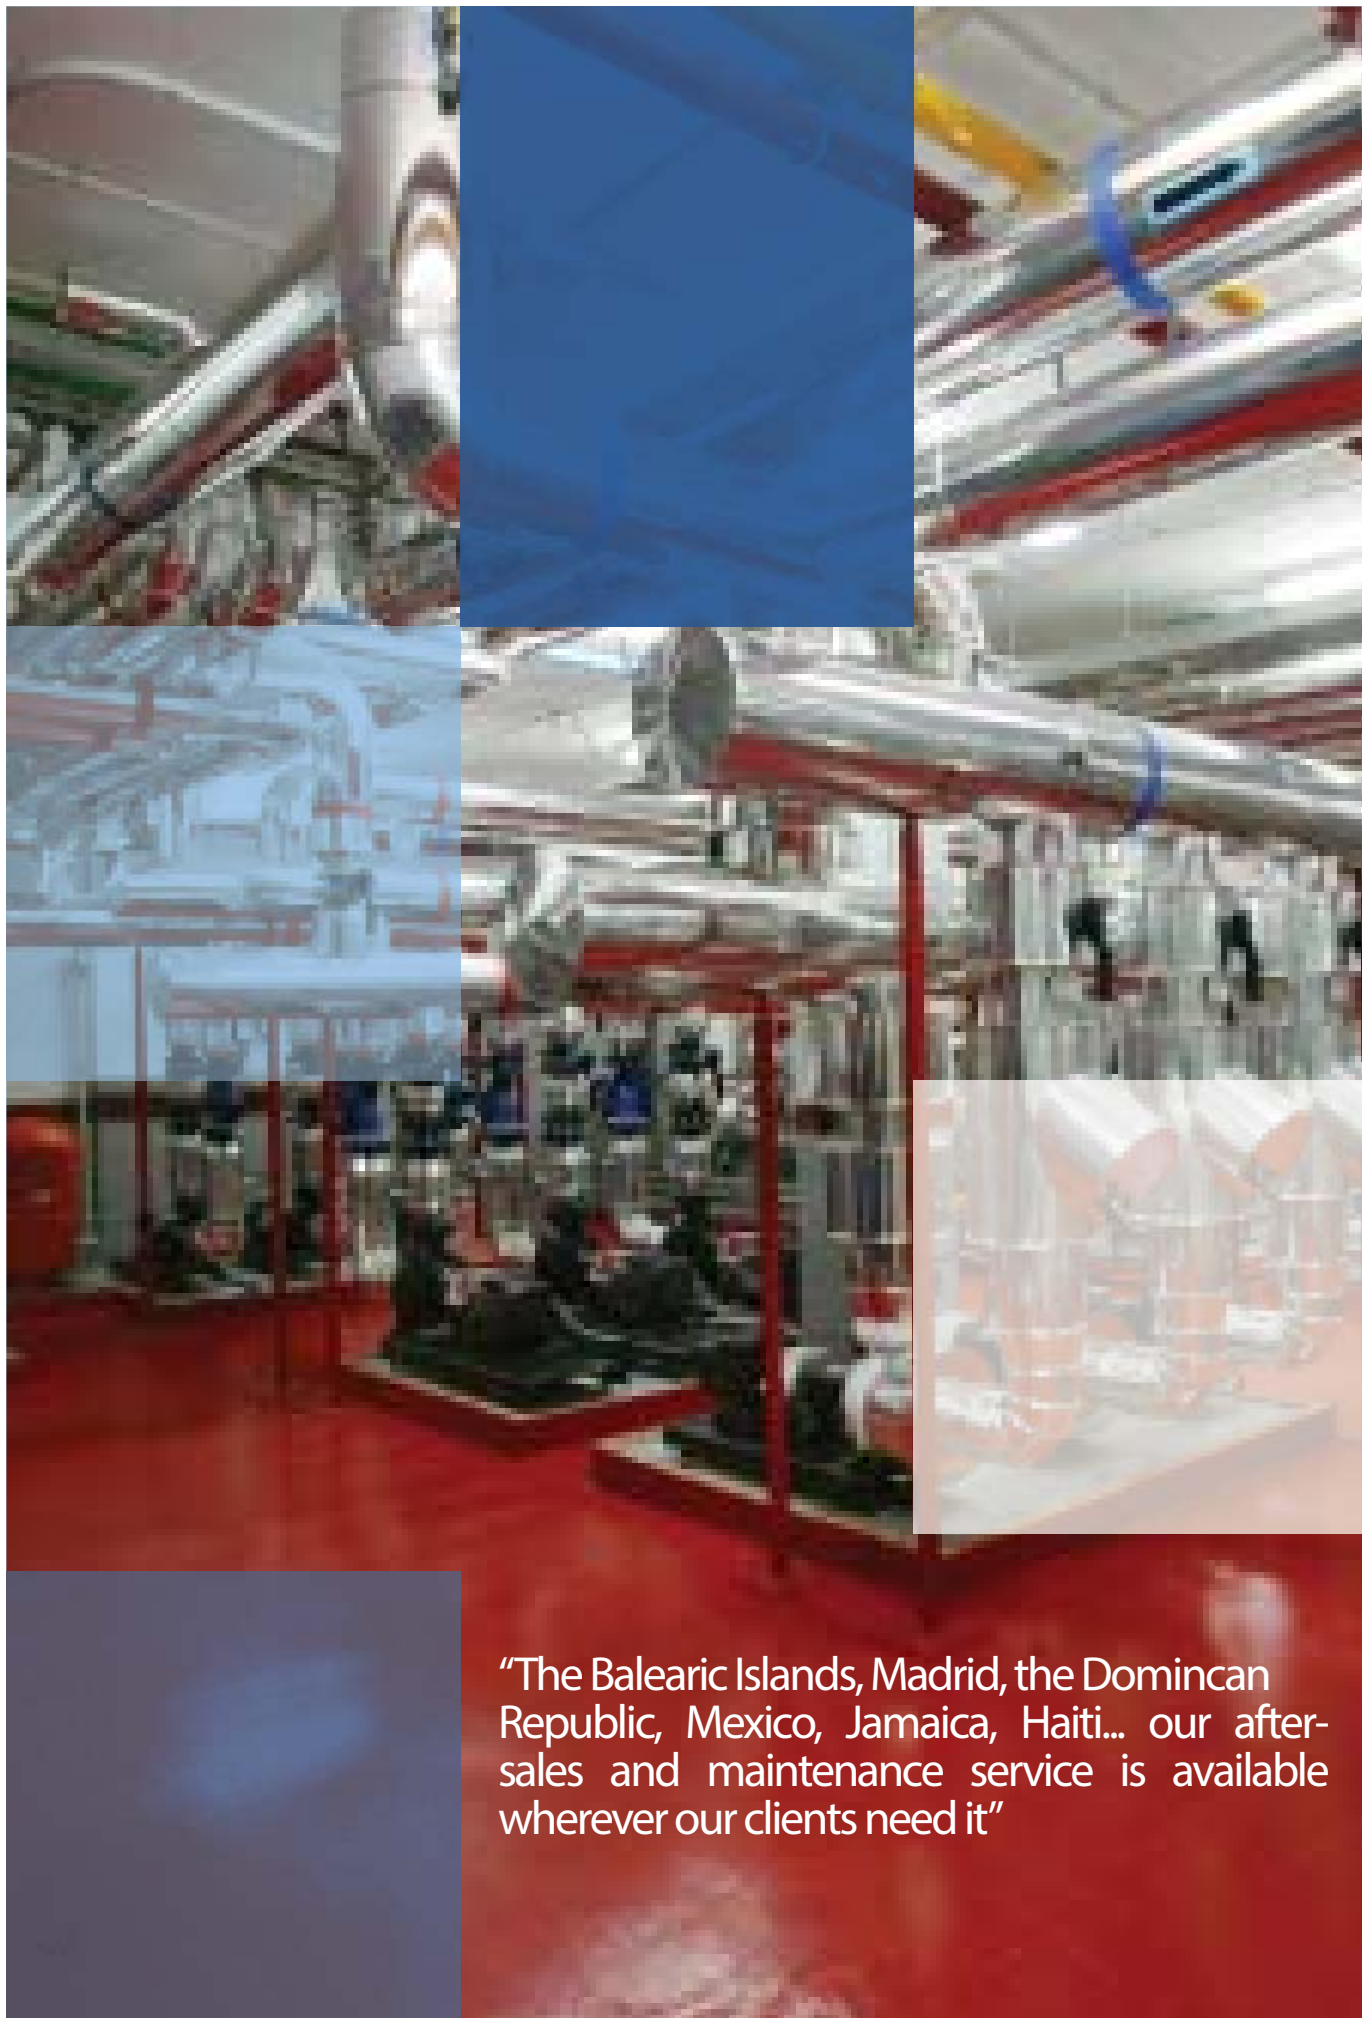

\* Low Voltage Installations:  
Lighting/ Lighting Control  
Power Distribution  
Power Generators  
UPS (Uninterruptible Power Supply)  
Reactive Power Compensation Batteries  
Overvoltage Protection/ Lightning Rod Protection

\* Very Low Voltage Installation:  
Television  
Phone Network Voice IP  
Structured Network Data  
Access Control  
CCTV  
Fire Alarms

For years, Humiclima has had its own BMS department from where many installations are programmed and managed. The advantage of having such a department is that our knowledge of programming joins forces with our experience with installations.

"BMS provides operational savings and a rapid solution to any problem"

"The Balearic Islands, Madrid, the Dominican Republic, Mexico, Jamaica, Haiti... our after-sales and maintenance service is available wherever our clients need it"

"Humiclíma believes that correct maintenance of an installation is as important as its proper execution"

## MAINTENANCE

"Our commitment to the client does not end with the start-up and handover of the system"

During the period of the manufacturer's guarantee, established by the regulations of each country and by contract, any anomaly in the functioning of the system will be attended to as a matter of priority.

At Humiclíma we believe that proper maintenance of an installation is as important as its correct execution. Humiclíma has been providing maintenance of its installations for over twenty years now, guaranteeing that they continue to work properly giving optimum results.

Aware as they are of how serious a problem it is when any client suffers interruptions in the service provided by their installations, our service teams are responsible for making sure that these do not stop working or that they restart at full capacity with the minimum possible delay.

Providing maintenance services requires specific skills and knowledge, complementary to although different from those necessary for installation, as well as purpose-designed management systems. This explains why Humiclíma has a separate unit for this service, with its own staff and materials.

Humiclíma also carries out a full maintenance service of buildings and installations, covering all possible requirements, including things such as the electrical installation, carpentry, cleaning, gardening, etc.

We contribute through gastronomy to add value and innovations to hotels, restaurants and buffets as well as hospitals associations: good eating and nutrition are compatible concepts.

Each consumer requires a customized solution.

 **FRIUSA**

"Before equipping, it comes analysing, knowing, planning and organizing the whole system what leads to design "

This allows kitchens to be profitable instead of cost incurring

# COMPREHENSIVE ORGANIZATION AND COMMERCIAL KITCHEN EQUIPMENT:

Cook & Serve  
Complete Cold Chain Combining

Our assets:

- Process Engineering
- Feasibility Studies
- Solution Planning
- Personnel Research
- Organization and Operations Manual
- Financial Projection
- Detailed Technical Projects
- New Technology Training
- New Techniques Training
- Software Implementation
- Ward and Comprehensive Implementation

- Modular commercial kitchens
- Integrated commercial kitchen
- Smokeless grills
- Selfcleaning kitchens
- High capacity production kitchen equipment
- Pasteurization equipment to guarantee innocuousness and food safety
- Cooling Systems
- Temperature reduction
- Food packaging solutions for longer-term food
- Buffet, self-service, free flow...
- Exhaust system
- Stainless steel furniture
- Regeneration and serving
- Cafeteria equipment...

## HUMICLIMA & FRIUSA

Our knowledge and expertise allow us to outline solutions and very profitable installations for each of our clients, both safe and efficient in all chains (cold, warm and combined).

Before equipping, organizing comes first. Each project must be understood so to propose the most appropriate bunch of solutions fitted to each establishment, not to mention clients' specific cultures or regions.

Our food solutions are steady and structured, it guarantees the Property that every professional will be able to work under the organization model set up by the Management, not the model established by every professional working in the kitchen throughout the years.

We guide projects to 4 unavoidable aims:

- Intelligent management to minimize costs
- Food quality
- Consumer safety
- Energy efficiency

*"There is change without improving but there is no improvement without changing"*

Our proposals will wonder you for their innovation, improving your income statements. Besides your staff will rely on an ease, flexible and versatile system

"Industrial Laundry must bring together Process, Planning, Organization and Technology."

Energy costs very often avoid management control.

Friusa keeps costs always under control"

**FRIUSA**

“Laundry produces some of the main costs...or savings. Its organization and equipment lead to a better optimization and savings in linen, energy and personnel”

“Guarantee hygiene and quality washing and ironing are key elements in a repetitive and recurrent process that shall be highly optimized, Synchronizing process procedures and technologies”

LAUNDRY: KEY SERVICE ANY HOTEL OR HOSPITAL ESTABLISHMENT.

Linen implies a high cost so its essential to minimize replacements employing treatments to ensure quality without harm, breaks, rigidity or yellowish cloth.

Laundry Solutions guarantee a better planning regarding industrial washing process setting out solutions and efficient low cost models per each kg of cloth washed..

To do that, analysis must be integrated along with organization and planning with the most appropriate technologies to each service in every establishment.

Under the scope of hotels, apart from guaranteeing a non-interrupted service, quality-cost factors become the aim of any laundry facility:

the perfect outfit, ironing, softness and whiteness in bed clothes are not an issue to neglect. To get it, technology procedures and the use of appropriate linen must be combined.

Under the scope of hospitals, as well as the previous issues, safety and hygiene are essentially meaningful if work is related to sanitary barrier

We have carried out installations in:

Spain  
Portugal  
Italy  
United Kingdom  
France  
Belgium  
Dominican Rep.  
Jamaica  
Mexico  
Brazil  
Panama  
Aruba  
Cape Verde
